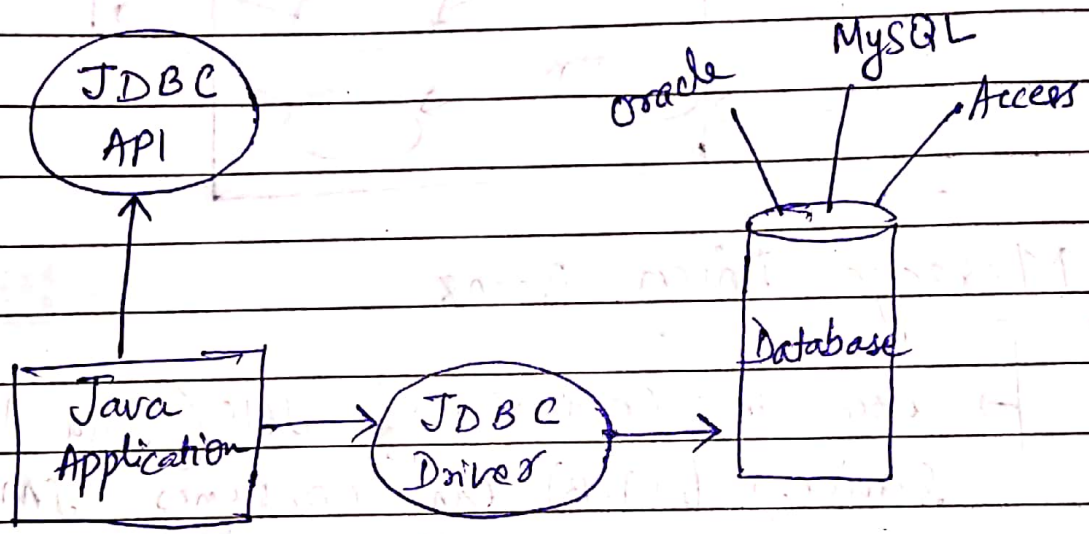
JDBC (Java Database Connectivity)

JDBC driver is a software component that enables java application to interact with the database.

↳ Java JDBC is a Java API to connect and execute query with the database.



⇒ Steps to connect to Database in Java (MySQL)

1. Driver class : the driver class for the MySQL database is com.mysql.jdbc.Driver

2. Connection URL :
   jdbc : mysql :// localhost : 3306 / Emp → Name of the database
   ↑ Port no.

3. Username → default is root
4. Password → ---

Date _____ Page no. _____

① Register Driver class

↳ forName() method

↳ Class.forName("com.mysql.jdbc.Driver");

② Create Connection object

```
Connection con = DriverManager.getConnection(
        "jdbc:mysql://localhost:3306/Emp", "root", "root");
```

→ Connection class object create

③ Create Statement Object → Executing queries of database

```
Statement stmt = con.createStatement();
```

④ Execute The Query

```
Resultset rs = stmt.executeQuery("select * from
                                  emp");
While(rs.next())
System.out.println(rs.getInt(1) + " " + rs.getString(2) +
                   " " + rs.getString(3));
```

⑤ close the Connection object

```
con.close();
```
