Subject Code: Sub-Name:
Computer Organization & Architecture- KCS-402
Important Paper of Unit 3

CO3: Implementation of control unit techniques and the concept of Pipelining.

questions

1. Draw the timing diagram for an instruction cycle and explain.
2. Explain the organization of the Microprogrammed Control unit in detail and also write the basic concept of Hardwired and Software control unit with a neat diagram.
3. Differentiate between Horizontal & Vertical microprogramming?
4. List the various methods for hardwired control
5. Define the types of microinstructions available?
6. Explain pipelining process in short.
7. Differentiate Horizontal and vertical micro codes.
8. Describe the subroutine.
9. Describe the interrupts and handling process of interrupts?
10. Write the short notes on the instruction pipeline.
11. Explain the organization of Microprogrammed control unit in detail.
12. Explain the concept of microprogram sequencer? With a block diagram, explain the working of a microprogram sequencer.
13. Describe a microprogrammed control unit? Give the basic structure of a microprogrammed control unit. Also discuss the micro-instruction format and the control unit organization for a typical micro programmed controller using suitable diagrams.
14. What is micro programmed control unit? Give the basic structure of micro programmed control unit. Also discuss the microinstruction format and the control unit organization for a typical micro programmed controllers using suitable diagram.
15. What do you mean by vector interrupt? Explain
16. How pipeline performance can be measured? Discuss. Give a space time diagram for visualizing the pipeline behavior for a four-stage pipeline
17. How a processor executed instructions? Define the internal functional units of a processor and how they are interconnected?
